For appropriate management of Compressor Air!

Introducing a new flow meter with higher cost performance!!

High Performance Ultrasonic Flowmeter

TRX/TRZ

Take a Close Look at Our Evolving Ultrasonic Flow Meter Measurement Technology

Lineup includes smaller nominal diameters!

TRX/TRZ flowmeters support achieving of "Visualization" to meet your needs.

100A · 150A · 200A

The standard for air measurement from now on

Pressure loss = "0", therefore, energy loss = "0"

Ultrasonic type measuring principle is adopted. No obstructions inside the measuring pipe, so there is absolutely no pressure loss.

Strong resistance to oil and vapor provides high durability

No moving parts means high resistance to fluids containing oil, vapor, and dust. Use with old piping and oil-supplying compressors is also possible.

* If contamination by oil, vapor, and the like is particularly high, vertical piping is recommended.

NEV

Kind of gas (Air, Nitrogen)

Wide range ability with ratio of 1:60 WIDE

The wide range ability allows for accurate measurement of even smaller flow rates. In addition, from the detection flow rate (measurement start flow rate) to the maximum flow rate, a wide range with a ratio of 1:400 is provided.

Battery power supply makes power line construction unnecessary

The built-in battery type (with a life of 10 years) makes power line construction unnecessary. In addition, the xternal power supply type (24V DC) is also available in his product lineup

Measurement and output of forward

Through the settings, measurement and output of forward

flow and reverse flow is possible. This allows for use in loop

piping and for determining the consumption volume for air

flow and reverse flow possible

RS485 output function

nsferred between factories.

is equipped Flow(Instantaneous flow-rate / Accumulated flow volume), pressure, and temperature can be outputted at the same ime. Also, meter alarms(flow measurement, pressure, nperature, communication circuit) are able to be outputted.

Flow meter replacement timing (For the battery type only)

Communication circuit alarm

"Propagation time difference" method superior in repeatability

For this flowmeter, 2 ultrasonic sensors are installed at its upstream and downstream sides

When fluid is flown towards the direction of the blue arrow on the drawing, because of flow speed, difference in time of propagation between ultrasonic wave transmitted from upstream side (red arrow) and ultrasonic wave transmitted from downstream side (yellow arrow) occurs

By detecting fluid's flow-rate (flow speed) with this time difference, flow volume is calculated based on the flow-rate and cross-sectional area of the flowmeter's measuring pipe.

Also, with the pressure sensor built in the flowmeter body. conversion to NORMAL (pressure/temperature compensation)

Examples of applications

2. For energy specific unit management by measuring air consumption amount of each building (Factory A, Factory B, etc.) on a factory's premises.

Reviewing of the pressure at the source By knowing necessary amount of air at each

line, changing the compressor's pressure to appropriate pressure leads to cost reduction

Grasp of the compressor operating load

Variation of air usage amount of whole of the factory TRX Pressure indication is possible

3. For "Visualization" control of load factor at compressor operation

Selection of VFl

By grasping load efficiency from air usage amount of each hour, reviewing way of operation of compressors leads to improvement of energy saving.

Management of electricity consumption per unit air (specific dynamic cost) by taking such data into a data logger, etc., contributes to effective operation of the compressor and electricity amount reduction.
